Picarro Surveyor Implementation Support

ICQ Professionals LLC Sr. Partners, Matt Storment and John Murray have been involved with the Picarro Surveyor since it was first introduced to PG&E (Pacific Gas & Electric) in 2011. John had executive level responsibility for supporting the PG&E commissioned PRCI (Piping Research Council International) comprehensive study of the Picarro technology with contracted project management and field testing of the equipment. Matt was PG&E's Director of Work Methods and Implementation responsible for developing qualifications, training and work procedures associated with the new technology. Matt's SME's provided technical support to multiple field tests of the equipment.

With their combined industry and Picarro Surveyor experience, Matt and John are uniquely qualified to assist your company in adopting and implementing this new approach to gas leak survey.

Some of the areas in which Matt and John's experience can help you successfully transition to a Picarro Surveyor based leak survey program include the following:

Project Management

- Implementation Schedule Development, Cost Tracking and Reporting
- Process Flow Development
- Equipment Approval Process
- Procedure and Standards Update Process
- Updated Compliance Schedules for Leak Survey and Corrosion
- Resource Evaluation and Management

Technology

- Develop Processes for Incorporating Data into GIS System
- Integrate Leak Validation Field Data Capture into Processes
- Develop Mobile Data Capture Processes

Training & Qualification

- LISA Validation and Pinpoint Surveys
- Driver and Equipment Operation
- Develop OQ's for Driving and Validation
- Assist Training Department as SME for Development of Training Modules

Quality Assurance / Quality Control

- Driver and Equipment Operator
- LISA Validation
- Program and Procedure Audits
- Data Quality Analysis and Trending
